Nebula

LaunchPad

Decentralized Token Launch Platform Portfolio

Live on Sepolia Testnet

Secure & Transparent

Bridging Creators & Investors

Mission

Nebula LaunchPad is a decentralized platform designed to streamline the process of launching, managing, and investing in new crypto tokens, connecting project creators with investors through a seamless, secure, and user-friendly interface.

Live on Sepolia Testnet

Possibilities

24/7

Availability

Key Value Propositions

- **Decentralized:** No single point of failure, community-owned platform
- **Accessible:** Lowering barriers for project creators and investors
- **Transparent:** All transactions verifiable on blockchain
- **Efficient:** Streamlined processes, reduced costs

Network Information

Chain ID

Sepolia

Core Features

Everything you need for successful token launches

Token Launching

Easily create and deploy new tokens with customizable parameters including tokenomics, vesting schedules, and sale mechanisms.

✓ Custom Tokenomics

Project Showcase

Explore a gallery of launched projects and upcoming sales with detailed information and real-time metrics.

✓ Discover Projects

Investment Portal

Secure interface for users to buy tokens and participate in presales with transparent pricing and instant confirmation.

✓ Secure Trading

Token Management

Dedicated dashboards for token owners to manage their projects, configure settings, and monitor performance.

✓ Owner Controls

Admin Controls

Comprehensive admin dashboard for platform oversight, user management, and system monitoring.

✓ Platform Oversight

Real-time Analytics

Visual data on token performance and platform statistics with interactive charts and comprehensive reporting.

✓ Data Insights

Integrated Ecosystem

All features work together seamlessly to provide a complete token launch experience—from creation to trading to management.

Technology Stack

Modern, scalable, and secure Web3 technologies

Frontend Stack

React + Vite

Fast development environment with modern React features

Framework

TailwindCSS

Utility-first CSS framework for rapid UI development

Styling

Wagmi + RainbowKit + Viem

Complete Web3 integration for wallet connections and smart contract interactions

Web3

Framer Motion

Animations

Recharts

Data Visualization

Smart Contracts

Hardhat

Professional Ethereum development environment for testing and deployment

Framework

OpenZeppelin Upgradeable

Battle-tested, secure, and upgradeable smart contract implementations

Security

Integration Benefits

- **Seamless:** All components work together harmoniously
- **Secure:** Industry best practices at every layer
- **Scalable:** Built for high traffic and growth

Web3 Wallet Connection

Seamless and secure MetaMask integration

Login Flow

1

Click "Connect Wallet"

User initiates connection from the dApp interface

2

MetaMask Popup

Wallet extension opens with connection request

3

User Approval

User reviews permissions and approves connection

4

Authentication

dApp verifies wallet address and grants access

Security Features

- No private keys exposed
- User maintains full control
- Transparent permissions

Multi-Wallet Support

Powered by RainbowKit, supporting 20+ wallets including MetaMask, WalletConnect, Coinbase Wallet, and more.

- 3. Review & confirm
- 4. Deploy to blockchain

Token Minting Interface

Real-time blockchain deployment experience

The screenshot displays the Nebula Token Minting Interface. The main heading is "Forge Your Legacy" with the subtitle "Deploy standard-compliant ERC20 tokens with built-in bonding curves on Base Sepolia." The interface is divided into two main sections: "Section A: Identity" and "Section B: Economics & Vision".

Section A: Identity

- Token Name:** Panda Coin
- Symbol:** POC
- Token Link (URL):** <https://10000.com/4wyf376/panda.png>

Section B: Economics & Vision

- Total Supply:** 100000
- Initial Price (ETH):** 0.002
- Token Vision:** Panda Panda Panda Panda

Overlaid on the right is a MetaMask "Transaction request" window. It shows the network as Sepolia, the request from localhost:5473, and the account signing with Account 2. The estimated network fee is 0.0041 SepoliaETH, and the speed is Market (12 sec). The window has "Cancel" and "Confirm" buttons.

Deployment Process

1

Transaction Submission

Confirm deployment transaction in MetaMask with gas fees

2

Mining Status

Real-time updates as transaction is confirmed on blockchain

3

Contract Address

Display deployed contract address for verification

Gas Optimization

Efficient contracts reduce deployment costs

Verification

Contracts verified on Etherscan for transparency

Team member profiles, experience, and credentials

Description

Detailed project overview, vision, and use cases

Token Purchase Interface

Simple and secure investment process

Purchase Flow

1

Select Amount

Enter desired investment amount in ETH/BUSD

2

Review Details

Confirm token amount, price, and total cost

3

Confirm Transaction

Sign transaction in MetaMask to complete purchase

Security

Smart contract verified
No custody of funds

Features

- Instant confirmation
- Real-time updates

Token Owner Dashboard

Comprehensive tools for project creators

Management Tools

Analytics

Investor count, funds raised, token distribution

Investors

View participant list with investment amounts

Settings

Update project info, social links, descriptions

Security

Manage admin roles and access permissions

Fund Management

- **Withdraw Funds:** Transfer raised funds to project wallet
- **Track Revenue:** Monitor real-time fundraising progress
- **Distribution:** View token allocation and vesting status

Platform Administration

Comprehensive control and monitoring center

Admin Dashboard

Decentralized governance protocol for Web3 communities

S

StellarFi

\$320K RAISED

DeFi lending platform with innovative yield strategies

Security & Compliance

Enterprise-grade protection for users and funds

Security Measures

Multi-Signature Wallets

Require multiple signatures for critical operations, preventing single point of failure

Access Controls

Role-based permissions ensure only authorized users can execute privileged functions

Smart Contract Audits

Professional security audits identify vulnerabilities before deployment

Compliance Framework

KYC/AML Procedures

Know Your Customer and Anti-Money Laundering verification for all users

Regulatory Compliance

Adherence to securities laws and financial regulations across jurisdictions

Best Practices

- **OpenZeppelin Libraries:** Reduces vulnerabilities
- **Reentrancy Guards:** Prevents recursive attacks
- **Emergency Pause:** Circuit breakers for critical issues

Technical Implementation

Architecture that powers the platform

System Architecture

Frontend Integration

React app connects to smart contracts via Wagmi/Viem providers

Smart Contract Layer

Factory pattern for token deployment, registry for tracking

Data Management

The Graph protocol for indexed blockchain data

Web3 Integration

Wallet Connections

EIP-1193

Standard provider interface for all Web3 wallets

Transaction Management

Viem

TypeScript-first client for Ethereum interaction

State Synchronization

Real-time

Automatic UI updates on block confirmations

Data Visualization

- **Recharts Library:** Interactive charts for token performance
- **Real-time Updates:** Live data from blockchain events
- **Responsive Design:** Adapts to all screen sizes

Development & Deployment

From code to production-ready platform

Development Process

1

Local Development

Hardhat local network for testing and debugging

2

Testing Suite

Comprehensive unit tests and integration tests

3

Sepolia Testnet

Deploy to testnet for staging and user acceptance

Vercel Deployment

Framework Detection

Automatic Vite configuration and build optimization

Global CDN

Edge network ensures fast loading worldwide

SSL & Security

Automatic HTTPS, DDoS protection, and firewall

Environment Variables

The Future of Token Launches

Nebula LaunchPad represents the next generation of decentralized fundraising—making token launches accessible, secure, and efficient for everyone.

Decentralized

Community-owned platform with no central authority

Accessible

Lower barriers for creators and investors worldwide

Secure

Enterprise-grade protection for all participants
